# The US, Economic News, and the Global Financial Cycle

Christoph E. Boehm UT Austin and NBER

T. Niklas Kroner Federal Reserve Board

NBER Summer Institute July 13, 2022

The views expressed are those of the authors and do not necessarily reflect those of the Federal Reserve Board or the Federal Reserve System.

## Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Importance of GFC

• Potential implications for exchange rate regimes, macroprudential policies,...

#### Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Importance of GFC

- Potential implications for exchange rate regimes, macroprudential policies,...
- ullet But: much evidence correlation based o policy relevance of GFC unclear (Bernanke, 2017)

#### Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Importance of GFC

- Potential implications for exchange rate regimes, macroprudential policies,...
- But: much evidence correlation based → policy relevance of GFC unclear
   Market All Sections (Bernanke, 2017)
- ⇒ Need better understanding of GFC (Bernanke, 201)

#### Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Importance of GFC

- Potential implications for exchange rate regimes, macroprudential policies,...
- But: much evidence correlation based → policy relevance of GFC unclear
   Market All Sections (Bernanke, 2017)
- ⇒ Need better understanding of GFC (Bernanke,

#### Our objective: establish novel driver of GFC

#### Global Financial Cycle (GFC)

 co-movement in risky asset prices, capital flows, leverage, and financial aggregates across countries (Rey, 2013)

#### Importance of GFC

- Potential implications for exchange rate regimes, macroprudential policies,...
- But: much evidence correlation based → policy relevance of GFC unclear
   (Bernanke, 20)
- $\Rightarrow$  Need better understanding of GFC

# (Bernanke, 2017)

#### Our objective: establish novel driver of GFC

- Isolating causal links difficult (simultaneity)
- So far: US monetary policy shocks (Miranda-Agrippino & Rey, 2020)

#### Focus on US macro news releases

#### Focus on US macro news releases

- Conjecture: US as center country ⇒ US business cycle shocks drive GFC
- Scheduled releases allow for causal research design

## Study effect of US macro news on intl. risky asset prices

- ullet Intraday event study  $\Rightarrow$  clean identification
- Macro release surprises (GDP, nonfarm payrolls,...)
- Stock indexes of 27 countries, VIX, and commodity prices

#### Study effect of US macro news on intl. risky asset prices

- 1. US macro news has strong effects on intl. risky asset prices
- 2. US macro news generates co-movement in stock markets across countries

#### Study effect of US macro news on intl. risky asset prices

- 1. US macro news has strong effects on intl. risky asset prices
- 2. US macro news generates co-movement in stock markets across countries

#### Quantify persistence of effect at lower frequencies

- Two-step approach by Altavilla et al. (2017)
- Explanatory power at monthly and quarterly frequencies

#### Study effect of US macro news on intl. risky asset prices

- 1. US macro news has strong effects on intl. risky asset prices
- 2. US macro news generates co-movement in stock markets across countries

#### Quantify persistence of effect at lower frequencies

3. US macro news explains sizable fraction of variation at lower frequencies

## Study effect of US macro news on intl. risky asset prices

- 1. US macro news has strong effects on intl. risky asset prices
- 2. US macro news generates co-movement in stock markets across countries

#### Quantify persistence of effect at lower frequencies

3. US macro news explains sizable fraction of variation at lower frequencies

#### Interpret empirical findings

- Caveat: news surprise ≠ structural shock
- Origin of shocks: global common vs. US-specific
  - Study effect of foreign macro news (G7)
- Transmission mechanism
  - Decomposition of stock market response

#### Study effect of US macro news on intl. risky asset prices

- 1. US macro news has strong effects on intl. risky asset prices
- 2. US macro news generates co-movement in stock markets across countries

#### Quantify persistence of effect at lower frequencies

3. US macro news explains sizable fraction of variation at lower frequencies

#### Interpret empirical findings

- 4. Asymmetry between US and foreign news  $\rightarrow$  Limited role for common shocks
- 5. Results consistent with dominant risk-taking channel

#### Related Literature

#### Global financial cycle:

- Antecedents: Diaz-Alejandro (1983, 1984); Calvo et al. (1993, 1996); Reinhart & Reinhart (2008)

  - International: Faust et al. (2007); Andersen et al. (2007); Ehrmann et al. (2011)

#### Outline

- 1. Research Design
- 2. Data
- 3. High-frequency Effects of US Macro News on GFC
- 4. Explanatory Power of US Macro News
- 5. Underlying Shocks: Global Common or US-Specific?
- 6. Transmission Mechanism
- 7. Conclusion

# 1. Research Design

## Research Design

#### Surprises

• Surprise of US macro series *y* for announcement time *t*:

$$s_{US,t}^y = \frac{y_{US,t} - \mathbb{E}[y_{US,t}|\mathcal{I}_{t-\Delta^-}]}{\hat{\sigma}_{US}^y}$$

- ullet Example: nonfarm payroll employment (y) published at 8:30 am ET on first Friday for given month (t) by US Bureau of Labor Statistics
- ⇒ Surprises are linear combinations of shocks driving US business cycle

# Research Design

#### Surprises

• Surprise of US macro series *y* for announcement time *t*:

$$s_{US,t}^y = \frac{y_{US,t} - \mathbb{E}[y_{US,t}|\mathcal{I}_{t-\Delta^-}]}{\hat{\sigma}_{US}^y}$$

- ullet Example: nonfarm payroll employment (y) published at 8:30 am ET on first Friday for given month (t) by US Bureau of Labor Statistics
- ⇒ Surprises are linear combinations of shocks driving US business cycle

#### **Estimating equation**

$$\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$$

- $q_{i,t}$ : (log of) country i's asset price of interest
- ullet  $\Delta$ : 30-minute change around announcement time t
- Identification assumption:  $\varepsilon_{i,t}$  uncorrelated with  $s^y_{US,t}$   $\Rightarrow \gamma^y_i$  can be consistently estimated by OLS and measures causal effect

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

How to interpret  $\gamma_i^y$ ?

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

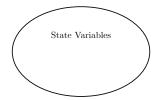

How to interpret  $\gamma_i^y$ ?

#### ⇒ Build Framework

- Extension of Faust et al. (2007) to international setting
- Log-linear multi-country world with a unique equilibrium

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

How to interpret  $\gamma_i^y$ ?

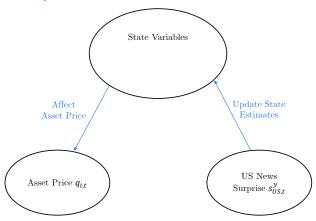

Asset Price  $q_{i,t}$ 

US News Surprise  $s_{US,t}^{y}$ 

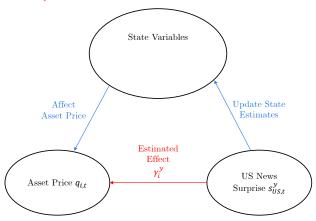

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

How to interpret  $\gamma_i^y$ ?

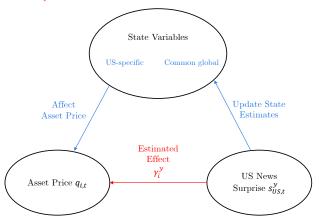

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

How to interpret  $\gamma_i^y$ ?

Estimation Equation:  $\Delta q_{i,t} = \gamma_i^y s_{US,t}^y + \varepsilon_{i,t}$ 

How to interpret  $\gamma_i^y$ ?

2. Data

#### **US Macro News**

# Cross-country Heterogeneity

## **Estimation**

$$\Delta q_{i,t} = \alpha_i + \gamma_i^y s_{US,t}^y + \sum_{k \neq y} \gamma_i^k s_{US,t}^k + \varepsilon_{i,t},$$

 $\bullet$  Country-specific coefficients  $\gamma_i^y$ 

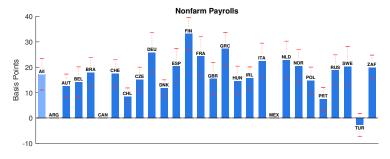

# Cross-country Heterogeneity

## **Estimation**

$$\Delta q_{i,t} = \alpha_i + \gamma_i^y s_{US,t}^y + \sum_{k \neq y} \gamma_i^k s_{US,t}^k + \varepsilon_{i,t},$$

 $\bullet$  Country-specific coefficients  $\gamma_i^y$ 

## Results

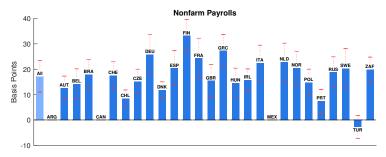

# Cross-country Heterogeneity

## **Estimation**

$$\Delta q_{i,t} = \alpha_i + \gamma_i^y s_{US,t}^y + \sum_{k \neq y} \gamma_i^k s_{US,t}^k + \varepsilon_{i,t},$$

ullet Country-specific coefficients  $\gamma_i^y$ 

## Results

⇒ US news introduce co-movement of stock markets

4. Explanatory Power of US Macro News

## Overview

## Question

 Can US macro news account for a sizable fraction of variation of international stock markets?

## Overview

## Question

 Can US macro news account for a sizable fraction of variation of international stock markets?

## **Empirical Challenge**

Variation of interest at lower frequencies (monthly or quarterly)

## Overview

## Question

 Can US macro news account for a sizable fraction of variation of international stock markets?

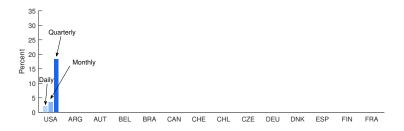

## **Empirical Challenge**

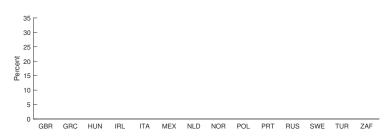

Variation of interest at lower frequencies (monthly or quarterly)

## **Approach**

- Use two-step method by Altavilla et al. (2017) Details
- For given asset price:
  - 1. construct daily "only US news occurred" counterfactual
  - 2. add up daily counterfactuals to obtain monthly and quarterly ones

# Global Common or US-Specific?

5. Underlying Shocks:

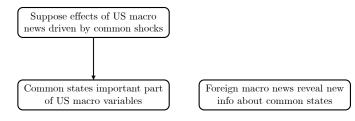

## Idea

Suppose effects of US macro news driven by common shocks

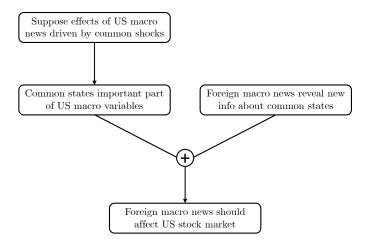

## Idea

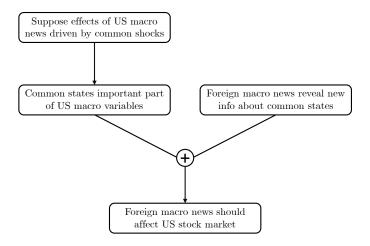

## Idea

## Idea

## Idea

• Note: "Test" more precise for smaller countries

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Example: Canadian Macro News**

Canada	Capacity Utilization	Core CPI	GDP	Housing Starts	Intl. Trade	Leading Indicators	Mfg Sales	IPPI	Retail Sales	Unemployment Rate
S&P 500 (bp)										
News	-0.05 (2.02)	1.84** (0.89)	-1.17 (1.12)	-2.13 (1.29)	0.45 (1.65)	-0.00 (1.66)	-1.01 (1.77)	1.24 (1.14)	0.34 (0.97)	-0.99 (1.01)
Observations	75	192	79	223	252	165	256	246	255	257
Effect on Exchange Rate	No	Yes	No	Yes	Yes	No	Yes	No	Yes	Yes

<sup>\*\*\*, \*\*,</sup> and \* indicate significance at the 1, 5, and 10 percent level.

1. Do foreign news releases affect US stock market?

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Example: Canadian Macro News**

Canada	Capacity Utilization	Core CPI	GDP	Housing Starts	Intl. Trade	Leading Indicators	Mfg Sales	IPPI	Retail Sales	Unemployment Rate
S&P 500 (bp)										
News	-0.05 (2.02)	1.84** (0.89)	-1.17 (1.12)	-2.13 (1.29)	0.45 (1.65)	-0.00 (1.66)	-1.01 (1.77)	1.24 (1.14)	0.34 (0.97)	-0.99 (1.01)
Observations	75	192	79	223	252	165	256	246	255	257
Effect on Exchange Rate	No	Yes	No	Yes	Yes	No	Yes	No	Yes	Yes

<sup>\*\*\*, \*\*,</sup> and \* indicate significance at the 1, 5, and 10 percent level.

1. Do foreign news releases affect US stock market?

• Here: they rarely affect S&P 500 (1/10)

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Example: Canadian Macro News**

Canada	Capacity Utilization	Core CPI	GDP	Housing Starts	Intl. Trade	Leading Indicators	Mfg Sales	IPPI	Retail Sales	Unemployment Rate
S&P 500 (bp)										
News	-0.05 (2.02)	1.84** (0.89)	-1.17 (1.12)	-2.13 (1.29)	0.45 (1.65)	-0.00 (1.66)	-1.01 (1.77)	1.24 (1.14)	0.34 (0.97)	-0.99 (1.01)
Observations	75	192	79	223	252	165	256	246	255	257
Effect on Exchange Rate	No	Yes	No	Yes	Yes	No	Yes	No	Yes	Yes

<sup>\*\*\*, \*\*,</sup> and \* indicate significance at the 1, 5, and 10 percent level.

1. Do foreign news releases affect US stock market?

• Here: they rarely affect S&P 500 (1/10)

2. But maybe foreign news releases are just not informative?

⇒ Study effect on US dollar exchange rate

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Example: Canadian Macro News**

Canada	Capacity Utilization	Core CPI	GDP	Housing Starts	Intl. Trade	Leading Indicators	Mfg Sales	IPPI	Retail Sales	Unemployment Rate
S&P 500 (bp)										
News	-0.05 (2.02)	1.84** (0.89)	-1.17 (1.12)	-2.13 (1.29)	0.45 (1.65)	-0.00 (1.66)	-1.01 (1.77)	1.24 (1.14)	0.34 (0.97)	-0.99 (1.01)
Observations	75	192	79	223	252	165	256	246	255	257
Effect on Exchange Rate	No	Yes	No	Yes	Yes	No	Yes	No	Yes	Yes

<sup>\*\*\*, \*\*,</sup> and \* indicate significance at the 1, 5, and 10 percent level.

- 1. Do foreign news releases affect US stock market?
  - Here: they rarely affect S&P 500 (1/10)
- 2. But maybe foreign news releases are just not informative?
  - ⇒ Study effect on US dollar exchange rate
  - Here: they often affect exchange rate (6/10)

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Summary Statistics**

- Only 8 out of 60 news releases significantly affect S&P 500 at 10% level (Even if significant, magnitudes relatively small!)
- Although 30 out of 60 news releases have significant effect on exchange rate

## What we do

• Estimate effect of foreign macro news (G7) on US stock market

## **Summary Statistics**

- Only 8 out of 60 news releases significantly affect S&P 500 at 10% level (Even if significant, magnitudes relatively small!)
- Although 30 out of 60 news releases have significant effect on exchange rate

  Table: Data Table: Results
- ⇒ Limited role for common shocks through lens of framework
  - Potential concern: timeliness of US releases (work in progress)
  - Supporting evidence: effect of US vs. foreign monetary policy shocks Figure

# 5. Transmission Channels of

**US Macro News** 

# Stock Price Decomposition (Boyd et al., 2005)

$$\Delta q_{i,t} \approx c_i \left[ \underbrace{\Delta g_{i,t}}_{\text{growth expectations}} - \underbrace{\Delta e p_{i,t}}_{\text{risk premium}} \right] - \underbrace{\Delta r_{i,t}}_{\text{interest rate}}$$

# Stock Price Decomposition (Boyd et al., 2005)

$$\Delta q_{i,t} \approx c_i \left[ \underbrace{\Delta g_{i,t}}_{\text{growth expectations}} - \underbrace{\Delta e p_{i,t}}_{\text{risk premium}} - \underbrace{\Delta r_{i,t}}_{\text{interest rate}} \right]$$

ullet Use 10-year govt. bond yield to estimate  $\Delta r_{i,t}$ 

# Stock Price Decomposition (Boyd et al., 2005)

$$\Delta q_{i,t} \approx c_i \left[ \underbrace{\Delta g_{i,t}}_{\text{growth expectations}} - \underbrace{\Delta e p_{i,t}}_{\text{risk premium}} - \underbrace{\Delta r_{i,t}}_{\text{interest rate}} \right]$$

- ullet Use 10-year govt. bond yield to estimate  $\Delta r_{i,t}$
- Stock & bond yield co-movement informative about dominant channel:
  - $cov(\Delta q_{i,t}, \Delta r_{i,t}) < 0 \Rightarrow interest channel dominant$
  - $\operatorname{cov}\left(\Delta q_{i,t},\Delta r_{i,t}\right)>0\Rightarrow\operatorname{growth}$  exp. & risk premium channel dominant

  - But: price news explains usually small fraction of variation

## ⇒ Interest channel cannot explain most of evidence

How can we rationalize findings?

#### How can we rationalize findings?

- $\Rightarrow$  Preferred story: risk-taking channel (risk-on/risk-off behavior)
  - Effect on implied volatility indexes ► Table
  - Financial integration associated with stronger response
  - Findings consistent with demand shift to riskier assets

#### How can we rationalize findings?

- ⇒ Preferred story: risk-taking channel (risk-on/risk-off behavior)
  - Effect on implied volatility indexes ► Table
  - Financial integration associated with stronger response Table
  - Findings consistent with demand shift to riskier assets
  - Note: changes in growth expectations potentially present

#### How can we rationalize findings?

- $\Rightarrow$  Preferred story: risk-taking channel (risk-on/risk-off behavior)
  - Effect on implied volatility indexes ► Table
  - Financial integration associated with stronger response Table
  - Findings consistent with demand shift to riskier assets
  - Note: changes in growth expectations potentially present

#### What about expected US monetary policy reactions?

#### How can we rationalize findings?

- ⇒ Preferred story: risk-taking channel (risk-on/risk-off behavior)
  - Effect on implied volatility indexes ► Table
  - Financial integration associated with stronger response Plane
  - Findings consistent with demand shift to riskier assets
  - Note: changes in growth expectations potentially present

#### What about expected US monetary policy reactions?

- US yield curve response similar to foreign response (but larger)
- $\Rightarrow$  cannot explain most of stock market responses

# 6. Conclusion

#### Conclusion

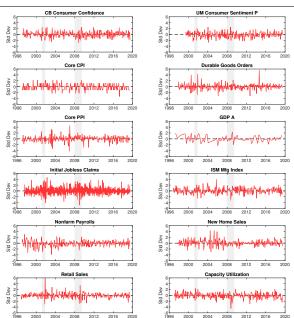

#### US business cycle shocks drive GFC

- 1. Document new empirical results based on US macro news
- 2. Show evidence consistent with limited role of common shocks
- 3. Point towards risk-based explanation as underlying mechanism

# Thank you!

$$\Delta q_{i,d} = \alpha_i + \sum_k \beta_i^k s_{US,d}^k + \varepsilon_{i,d}.$$

- $\Delta q_{i,d}$ : Daily (close-close) of asset price q of country i
- ullet  $s^k_{US,d}$ : U.S. macro news k on day d

#### 2. Calculate fitted values

$$hni_{i,d} := \widehat{\Delta q_{i,d}}$$
  $hni_{i,d}^{(h)} = \sum_{i=0}^{h-1} hni_{i,d-j}$ 

#### 3. Monthly/Quarterly regression

$$\Delta q_{i,d}^{(h)} = \alpha_i^{(h)} + \beta_i^{(h)} \frac{hni_{i,d}^{(h)}}{h} + \varepsilon_{i,d}^{(h)}$$

33

ullet R-squared: explanatory power of US macro news at horizon h

#### Idea

• surveys only capture info about headline variables of macro release ⇒ unobserved non-headline effects

#### **Estimation**

- For each major release l, estimate latent non-headline news factor  $f_{US,d}^l$
- Exploit differences in variances of announcement and non-announcements days unexplained by the headline surprises estimation based on US yields

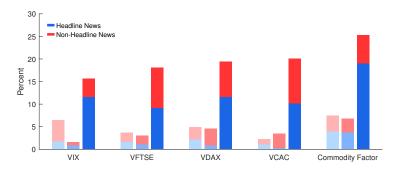

#### Incorporation in Low-Frequency Analysis

Use non-headline factors in first step

$$\Delta q_{i,d} = \alpha_i + \sum_k \beta_i^k s_{US,d}^k + \sum_l \gamma_i^l f_{US,d}^l + \varepsilon_{i,d},$$

Based on fitted value, monthly and quarterly aggregation as before

- ⇒ Financial integration amplifies (reduces) effect for real news (price news)
- $\Rightarrow$  Consistent with amplification of growth exp. and risk premium channel

► Data ► Estimation ► Table: Trade Int. & Industry Sim.

#### **Financial Integration Measure**

- Data source: Lane & Milesi-Ferretti (2007, 2017)
- Financial integration of country i in year  $\tau$ :

$$\mathsf{finInt}_{i,\tau} = \frac{\mathsf{FA}_{i,\tau} + \mathsf{FL}_{i,\tau}}{\mathsf{GDP}_{i,\tau}}$$

- $FA_{i,\tau}$  ( $FL_{i,\tau}$ ) stock of foreign assets (liabilities)
- Components:
  - 1. Portfolio investment
  - 2. Foreign direct investment
  - 3. Other investments (e.g. loans, deposits, and trade credits)
  - 4. Financial derivatives
  - Reserve assets

# Role of Financial Integration — Estimation Return

$$\begin{split} \Delta q_{i,t} &= \alpha_i + \gamma^y s_{US,t}^y + \delta^y \left( s_{US,t}^y \times \mathsf{finInt}_{i,t-} \right) \\ &+ \sum_{k \neq y} \gamma^k s_{US,t}^k + \sum_{k \neq y} \delta^k \left( s_{US,t}^k \times \mathsf{finInt}_{i,t-} \right) + \zeta \, \mathsf{finInt}_{i,t-} + \varepsilon_{i,t}, \end{split}$$

- $\Delta q_{i,t}$ : 30-min change around announcement y at time t
- finInt<sub>i,t</sub>: predetermined measure of financial integration
- $\delta^y$ : differential response of country with one std. dev. greater-than-average degree of financial integration

#### Role of Financial Linkages — Trade Int. and Industry Dissim.
